

**OBJECTIVE:**

Create a purpose-built clinic with all the amenities.

**CHALLENGE:**

Install sinks and toilets without compromising the structural integrity of the space.

**SOLUTION:**

**SANISPEED+**

**SANICOM 1**

**SANIACCESS 2**

## ANGLESEA CLINIC, HAMILTON NZ

The Anglesea Gynaecology Clinic is a premium centre considered one of the best in New Zealand. The facility where the clinic was located became too small for the demand, so the clinic needed to relocate.

A space became vacant in a large medical complex nearby, so the owners decided to move from where they were and build a brand new clinic in that space.

For this new clinic, the owners wanted to redesign the floor plan to suit the modern architecture and achieve a better flow in the room. They were looking to upgrade how they present their business to the public and to their patients.

Due to the nature of the business, the clinic required multiple hand basins and toilets, as well as a plumbing solution that could handle the clinic's particular type of waste (e.g. blood).

Gavin Robins, architect, builder and project manager for the clinic's fit-out, did not anticipate plumbing to be a problem until he discovered that the gravity drainage below the floor was not accessible.

Implementing a plumbing solution the traditional way would have been an incredibly costly and painful exercise. It would have required closing the business below for the duration of the work and the use of a core drill to get access to the plumbing lines below the floor.

That's why the project manager needed a solution that would allow them to pump the waste water up to the ceiling where the current sewer line exists. After extensive research into what alternatives were available in New Zealand, they discovered Saniflo.

**"We investigated quite a number of different options and the Saniflo products appealed to me in particular because their pumps were really compact and tidy."**

- Gavin Robins, Architect and Project Manager.

Where the space was not available to install the pumps, custom furniture was designed and built to accommodate the space and also created a new feature for that wall.

## SANISPEED+

The Sanispeed+ is a proven product with many satisfied customers. Its compact size allows ease of installation in small spaces, all without compromising performance.

In this project, the Sanispeed+ was used for the examination rooms hand basins, and it also allowed the installation of a kitchenette.

**“Due to its compact size, the pumps were able to be discreetly installed under the sink and hand basins, and within the walls cavities without compromising the sleekness of the clinic’s design which was very important in this project.”**

- Greg Waters, Technical Manager Saniflo Australasia.

## SANICOM 1

**“The Sanicom 1 was specified for medical and laboratory facilities. It was chosen for the procedure room because of its increased tank size for dilution assistance coupled with its high performance.”**

- Greg Waters, Technical Manager Saniflo Australasia.

The Sanicom 1 is a powerful pump for greywater waste, ideal for busy commercial environments.

It was perfectly suited to the clinic’s specific needs due to its ability to handle waste such as blood, contaminants and 90°C waste water.

## SANIACCESS 2

The Saniaccess 2 was the obvious choice of pump for the clinic bathroom applications as it is compact and quiet.

**“ The main benefit of using this macerator pump is the ease of access for serviceability. The panels on top of the unit give direct access to the blades and the electrical chamber. It is ideal for medical centres, or anywhere where blockages are a potential.”**

- Greg Waters, Technical Manager Saniflo Australasia.

The Saniaccess 2 was installed behind the toilet within the wall with an access panel for ease of maintenance.

### ABOUT SANIFLO

Saniflo is a brand created and owned by the French owned SFA Group . For over 60 years the SFA Group's goal has been to allow one to easily install toilets, showers, sinks, kitchens, baths and hand basins literally anywhere. From its early beginnings as the inventor of the domestic macerating system, the SFA Group is today amongst the main companies providing pump solutions worldwide. Synonymous with quality and technical expertise, Saniflo's made in France products comply with the strictest quality requirements and consistently meet customer expectations. Saniflo products all have Australian Watermark approval and their pumps are intended to be installed by licensed plumbers.

### SANIFLO'S DESIGN SERVICE

Saniflo offers project consultancy and assists architects and hydraulic consultants by reviewing plans, assisting with design layouts and recommending the correct pumps and their ideal location. We even work with the plumber onsite during installation to ensure that everything goes as planned. Saniflo has a wide selection of products for domestic and commercial application to provide design flexibility.
